

INDUSTRY: organisation involved in production & supply of goods & services.

Classifies as Primary, secondary, tertiary.

- ➔ Primary sector: goods produced using natural resources.
Acts as base of all other sectors
Ex. Agriculture, Dairy etc.
- ➔ Secondary Sector: Natural produced turned into other forms by manufacturing
Also called as Industrial sector
Ex. Making sugar from sugarcane
- ➔ Tertiary sector: Does not produce any goods & services.
Provide services to other sectors.
Ex. Banking, transportation etc.

Factors affecting location for Industries:

- (i) Availability of raw material
- (ii) Nature of industry
- (iii) Transportation facility
- (iv) Skilled and cheap labour availability
- (v) Capital, entrepreneurship
- (vi) Electricity & fuel availability
- (vii) Market

Mineral resources: Naturally occurring substance, chemical formula, solid & inorganic & has crystal structure.

Five major mineral belts in India: -

- ➔ Northern belt
- ➔ Central belt
- ➔ Southern-Eastern belt
- ➔ South-Western belt
- ➔ North-Western belt

Iron & Steel Industries

- Important raw materials – Iron, dolomite, limestone, coking coal
- The highest producer is the Odisha Jharkhand belt, **Durg Bastar Chandrapur** belt, **Bellary-Chitradurga-Chikmagalur-Tumkur** belt, and the Maharashtra Goa belt
- About 95% of total reserves of iron ore is found in the States of Odisha, Jharkhand, Chhattisgarh, Karnataka, Goa, Telangana, Andhra Pradesh, and Tamil Nadu.

Issue/ challenges:

- Lack of mechanization
- Metallurgical coal shortage
- Less imports cost due to dumping by countries like China
- Erratic power supply

Aluminium Industry

→ Raw materials are Bauxite, caustic soda, aluminium fluoride

Issues/challenges:

- ➔ Concentration of production in few units.
- ➔ Over reliance on imports.
- ➔ Administrative delays, complex laws.
- ➔ Domestic production cost rise due to increase in energy cost

Automobile Industry:

Issues/challenges by Automobile industry in India:

- ➔ Droop in household request due to Covid actuated lockdown.
- ➔ Digitized transportation.
- ➔ Inclination towards electric & hybrid vehicles.
- ➔ Domestic production cost rise due to increase in energy cost

Semi-conductor manufacturing Industry:

- ➔ Semiconductors- building blocks of today's technology.
- ➔ Smartphone assembly industry→ numerous employment opportunities
- ➔ Attract local taxes and improve export potential
- ➔ Self-sufficiency will decrease reliance on imports
- ➔ Locally made chips are considered as trusted sources

India's stand on Semi-Conductor Manufacturing

- ➔ Well Design & verification for semiconductor.
- ➔ SITAR, DRDO—building silicon chips for strategic purposes like defense & space

Issues/Challenges:

- High cost of establishment
- Ease of doing business is low
- Technological constraint
- Structural constraint
- Unstable power supply

Initiatives promoting indigenous capacity:

1. National policy on electronic 2019
2. Scheme for promotion of manufacturing of electronic components and semiconductors (SPECs)
3. Modified electronics manufacturing clusters (EMC 2.0) Scheme
4. PLIs
5. Foreign Direct Investment

Fertiliser Industry:

Issues/Challenges:

- Limited domestic production rock phosphates → dependence on imports increased
- Overuse of urea by farmers
- Environmental impact

Initiatives/policies

Cooperatives such as IFFCO & KRIBHCO → for development of industry

Petrochemical industries & oil refining

- Petrochemical industry uses raw material from petroleum refineries.
- Mainly Naptha, petrol, gas and various polymers

Oil refining

- Located mostly on the coast.
- Refineries might be useless when the field is exhausted.
- Distant from petroleum products markets.

Pharmaceutical Industries

- Can be prone to relocation.
- Land, labour, capital are spatially fixed.

Issues/Challenges:

- Issues in patent regime
- Dependence on other countries for active pharmaceutical ingredients
- Pirated version of medicines, black marketing
- Lack of R&D

Textiles industry & Technical textile

- Textile industry – cotton, jute, silk, wool
- Industry is going rapidly at the rate of 12% CAGR

Issues/Challenges:

- Competition from international players
- Obsolete automation & machinery
- Unorganized in nature
- Increased cost of raw material

Technical textiles

- Engineered products with a defined function.
- Natural as well as man-made Ex. Nomex, Kevlar, Spandex. Twaron
- High tenacity
- Excellent insulation
- Improved thermal resistance

Food Processing Industry

- Located mostly in the regions of agricultural dominance

Issues/Challenges:

- HYV seed reduces diversity of crops
- Climate change & drought
- Land acquisition challenges
- Erratic power supply
- Lack of integrated agriculture marketing and corporate farming.

Paper & pulp industry

- Pulp making → raw material oriented
- Paper making → market oriented
- Huge amount of fresh water is required.
- Vast power supply is essential
- Highly mechanized & little labour is required
- Highly capital intensive.
- Suited for thinly populates, forest areas with low amount of industrialization.

Cotton Industry

- 04 types: American cotton, Asian cotton, Egyptian cotton, African cotton
- Power to drive the looms, labour, capita are factors determining the location of the industry.

Jute Industry

- Known as golden Fiber
- Renewable & biodegradable Fiber
- Mostly located – Brahmaputra valley, west Bengal terai region, east coast regions.
- Abundant water & coal – sources of energy
