Consider the following statements:

1. Amakantak Hills are at the confluence of Vindhya and Sahyadri Ranges.
2. Biligirirangan Hills constitute the easternmost part of Satpura Range.
3. Seshachalam Hills constitute the southernmost part of Western Ghats

How many of the statements given above are correct?

- a) Only one
- b) Only two
- c) All three
- d) None

First is wrong, Vindhya's and satpuda.

Secnodi wrong maikal is ester most

3 is working seshachalam hills are part of eastern ghat.

2023

- **Statement 1 is incorrect:** Amarkantak is a pilgrim town in Anantpur, Madhya Pradesh, India. The Amarkantak region is a unique natural heritage area and is the meeting point of the Vindhya and the Satpura Ranges, with the Maikal Hills being the fulcrum.
- **Statement 2 is incorrect:** The Biligirirangan hills are not a part of the Satpura range. The Biligirirangan Hills is a hill range situated in south-western Karnataka, at its border with Tamil Nadu (Erode District) in South India. The area is called Biligiri Ranganatha Swamy Temple Wildlife Sanctuary. It is part of Eastern Ghat.
- **Statement 3 is incorrect:** The Sesachalam hills, also known as Tirumala hills, are not a part of the Western Ghats. Seshachalam Hills are hilly ranges part of the Eastern Ghats in southern Andhra Pradesh state, in southeastern India. The Seshachalam hill ranges are predominantly present in Tirupati district of the Rayalaseema region in Andhra Pradesh, India.

Consider the following pairs:

Place of Pilgrimage	Location
1. <u>Srisailem</u>	<u>Nallamala Hills</u>
2. <u>Omkareshwar</u>	<u>Satmala Hills</u>
3. <u>Pushkar</u>	<u>Mahadeo Hills</u>

Which of the above pairs is/are correctly matched ?

- (a) 1 only
 (b) 2 and 3 only
 (c) 1 and 3 only

2016

Consider the following pairs:

Famous Place: Region

1. Bodhgaya: Baghelkhand
2. Khajuraho: Bundelkhand
3. Shirdi: Vidarbha
4. Nasik (Nashik): : Malwa
5. Tirupati: : Rayalaseema

Which of the pairs given above are correctly matched?

(a) 1, 2 and 4 (b) 2, 3, 4 and 5
 (c) 2 and 5 only (d) 1, 3, 4 and 5

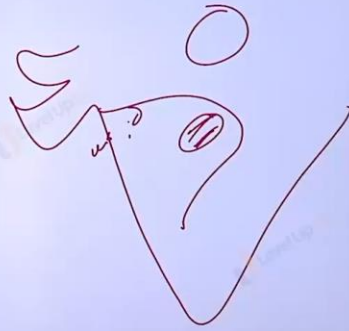

2016

Consider the following pairs:

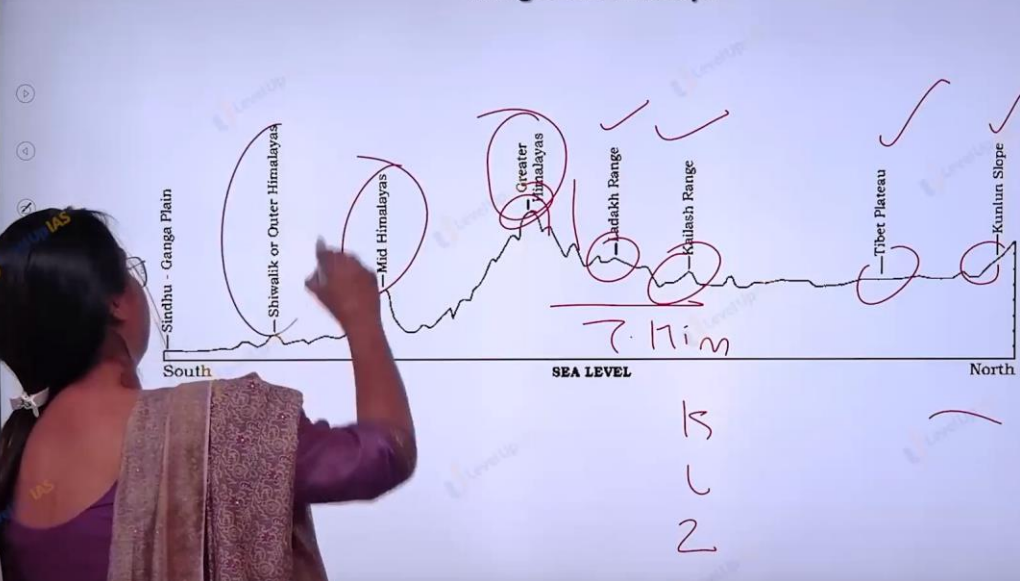

- (a) Famous Place: Region
- (a) 1. Bodhgaya: Baghelkhand
 - (b) 2. Khajuraho: Bundelkhand ✓
 - (c) 3. Shirdi: Vidarbha
 - (d) 4. Nasik (Nashik): Malwa ✓
 - (e) 5. Tirupati: Rayalaseema ✓

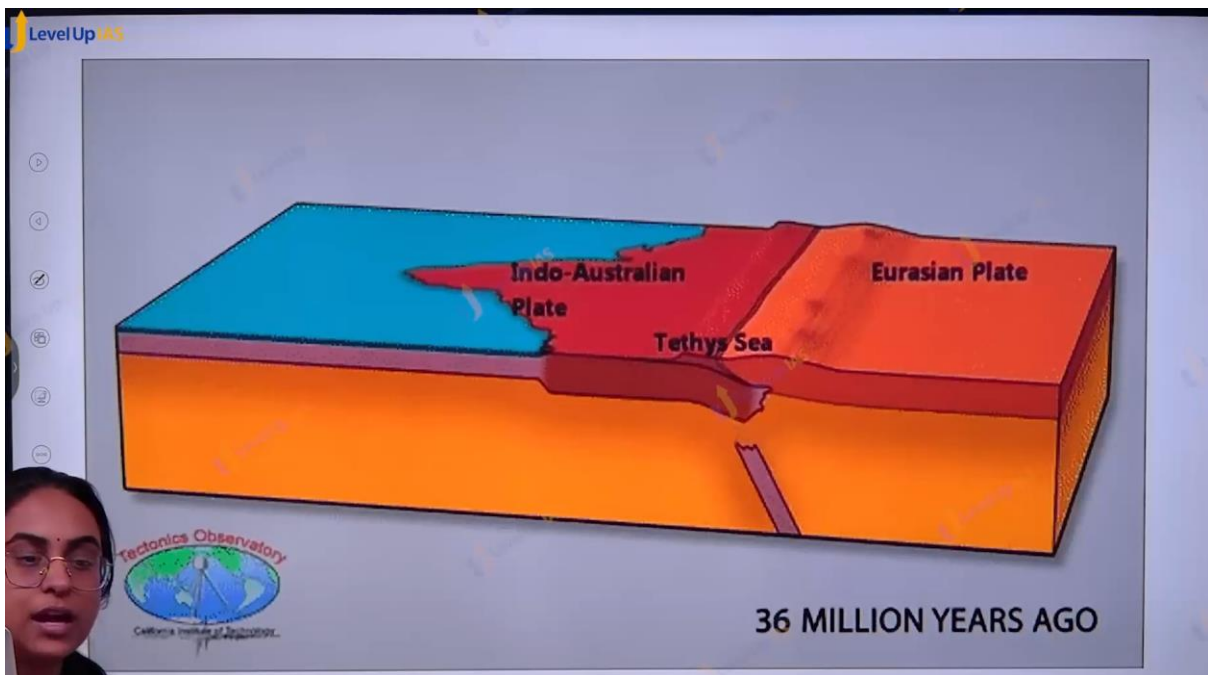

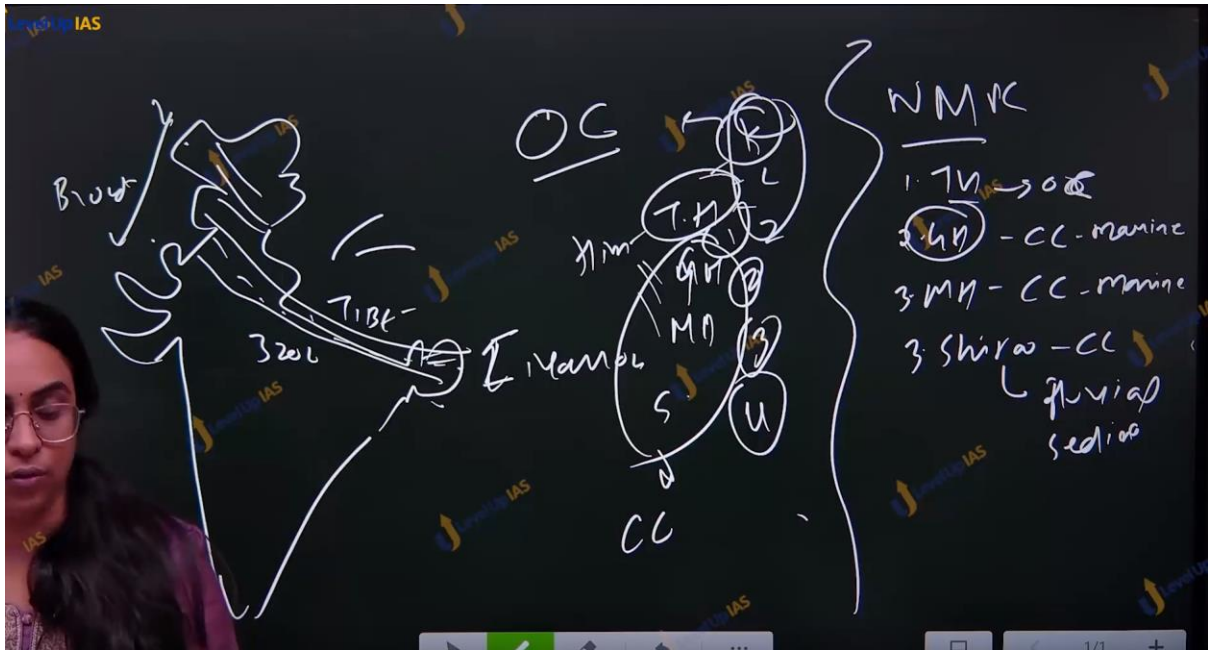

Which of the pairs given above are correctly matched?

- (a) 1 and 2 (b) 2, 3, 4 and 5
(c) 3 and 5 only (d) 1, 3, 4 and 5

Ranges of Himalaya

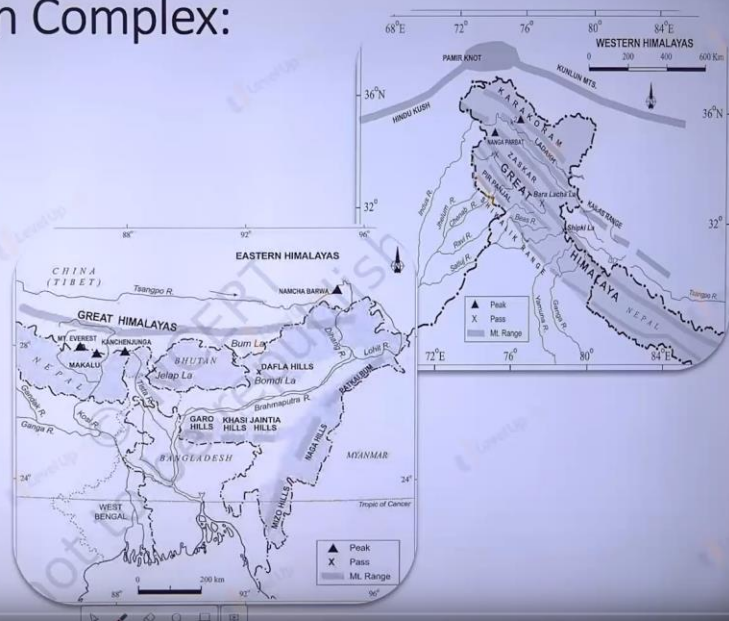

Northern Mountain Complex:

- Are series of parallel mountain range
- Are young, weak and flexible unlike rigid & stable Peninsular Block.
- Are tectonic in origin (formed due to collision of Indian Plate with Eurasian Plate)

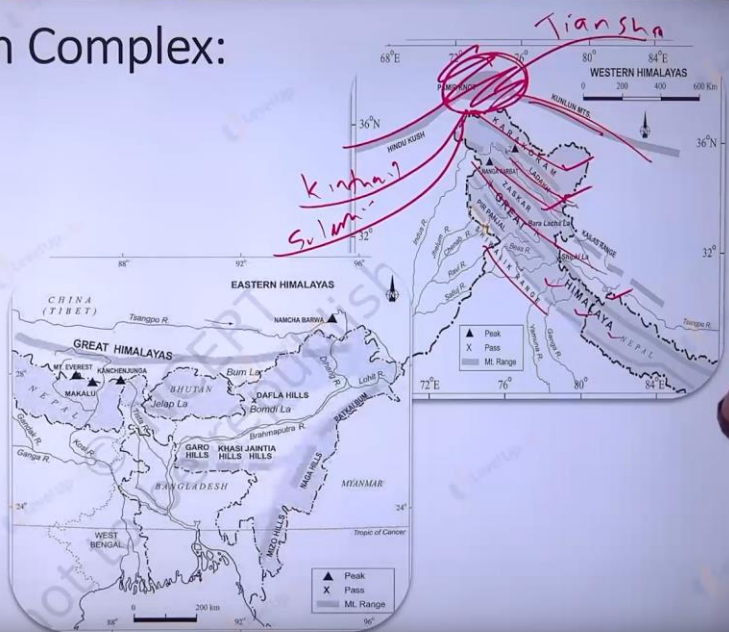

Length: 2,500 km from east to west

Width: 160-400 km from north to south

Northern Mountain Complex:

- Width: 160-400 km from north to south

Map showing the Northern Mountain Complex, including the Great Himalayas, Eastern Himalayas, and Western Himalayas. The map includes labels for various mountain ranges, peaks, and passes. A hand is pointing to the map.

LevelUp IAS

Details of Northern Mountain Complex

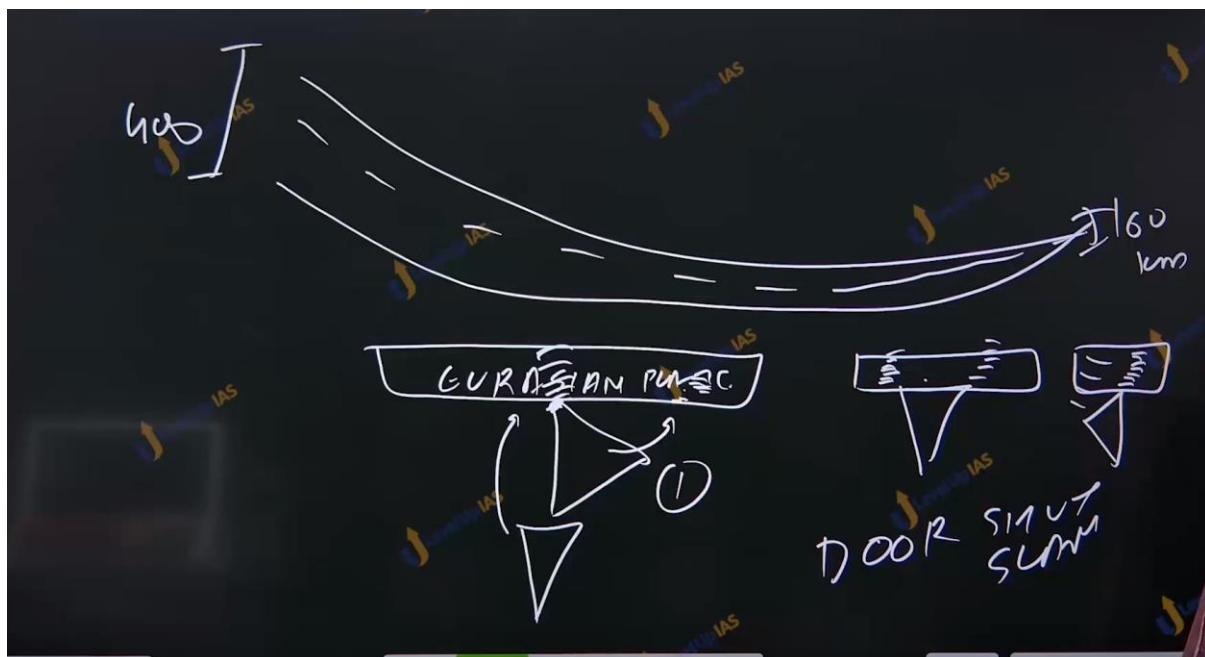

- Series of ranges:
- **Trans Him:** Karakorum, Ladakh, Zaskar: Formed by Upliftment of Tethys Sea Sediments: O-C Collision
- **Great Him:** Continuous Range: C-C Collision: Formed by Upliftment of marine sediments: sedimentary and metamorphic
- **Middle Himalayas:** C-C Collision: Formed by Upliftment of marine sediments: sedimentary and metamorphic
 - Broken Ranges and are locally known by different names like:
 - Pir Panjal in Jnk and H.P
 - Dhauladhar in H.P
 - Mussorie, Nagtibba, Garhwal in UTK
- **Shivalik:** C-C Collision: Formed by upliftment of fluvial deposits
- **Purvanchal Range:** CC Collision: Marine Sediments.

Handwritten notes and diagrams:

- Lesser him* (written in red)
- uplifted Alluvial fan of rivers* (written in blue)
- Patkai, Naga, Manipuri, Miz* (written in blue)
- A diagram showing a cross-section of the mountain ranges with labels: *Trans him*, *Great him*, *Middle him*, *Shivalik*, and *Purvanchal Range*.

Details of Northern Mountain Complex

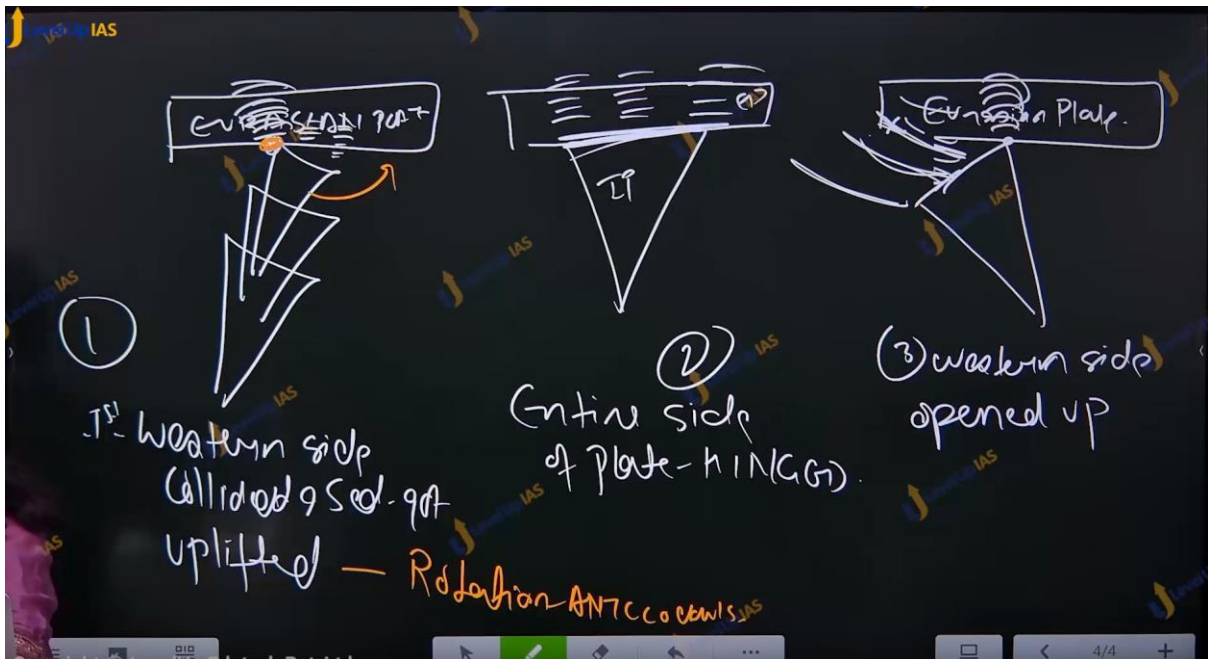

- Upliftment still continues and Indian Plate is moving at speed of 5-10 cm/year making the northern portion tectonically unstable
- Himalayas **are tallest mountain range** because:
 - Young (Not eroded much)
 - Upliftment still continues
 - Doubling of crust
 - Enormous sediment between Eurasian Plate and Indian Plate
- Himalayan Range extend from Namcha Barwa (Above Aru Prad) and Nanga Parvat (JnK)

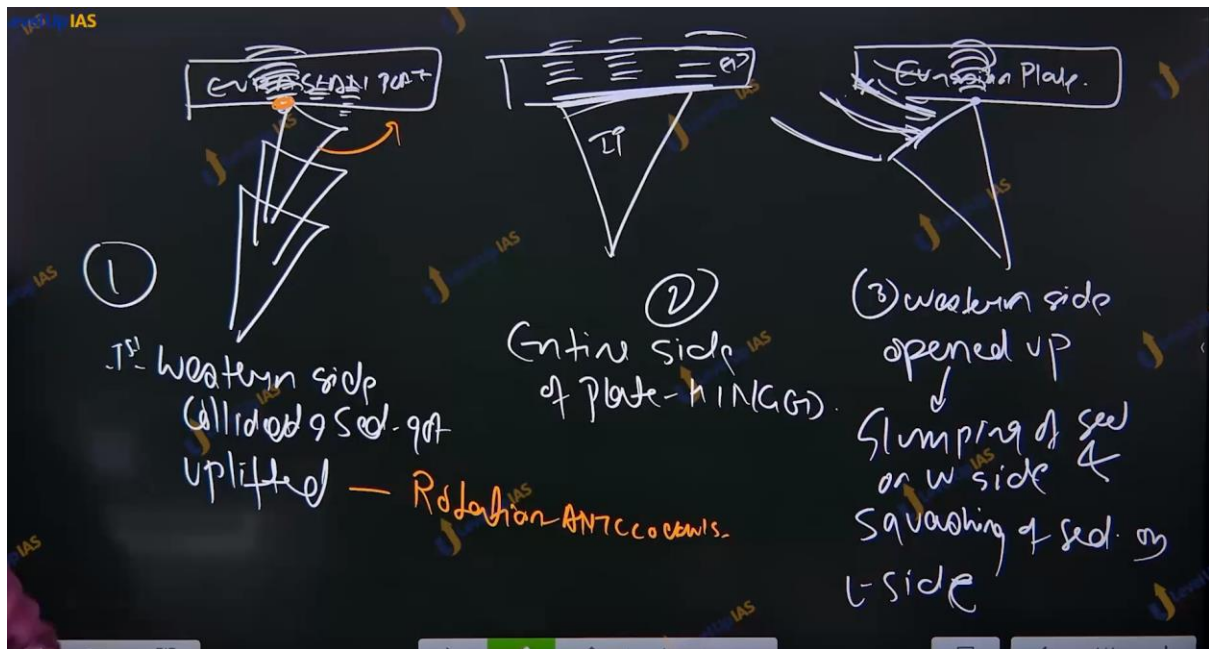

Door Slam Shut

Sequence of collision of Peninsular Plateau

- Collision first happened on Western Side
- Plateau then rotated in anti clockwise manner and got hinged on the NE side and western side got opened.
- Opening of Western Edge led to slumping of sediments on W. Him whereas Eastern Him continues to be squashed.
- This explains why Western Himalayas are broader while the Eastern Himalayas do not have distinct range.

Eastern Himalayas	Western Himalayas
Broader: 400 km: N-S	Narrower: 250 km: N-S
Ranges are more distinct: TH, GH, MH, Shivalik.	Ranges are not distinct: TH, GH, MH, Shivalik cannot be distinguished.
They are not as steep. They rise up as a series of steps	Very Steep. Rise abruptly from foothills
They have more Hill station and Glaciers	They have less Hill station and Glaciers
More Drier	More Wetter, Moist
Coniferous, Deciduous forest	Evergreen Forest

Eastern Himalayas V/s Western Himalayas

Himalayas are not water divide

1. Almost all the Himalayan rivers cut across mountains and drain into N. Plain
2. Such Rivers are called as **Antecedent Rivers**. Rivers are older than Himalayas as Himalayas uplifted the rivers could cut across the Himalayas.
3. This happened as rivers were large enough and Himalayas were rising at the rate, were the rivers could keep pace and erode
4. When **Mountains were being uplifted**, they rivers form Tibetan highlands were blocked and formed longitudinal lakes between the ranges.
5. Eventually as the rivers cut across the lakes were drained leaving behind the dry lake beds called as

DUN/WADI between Him Ranges

These are location for **agriculture and Horticulture**

Good place for the lacustrine Deposits

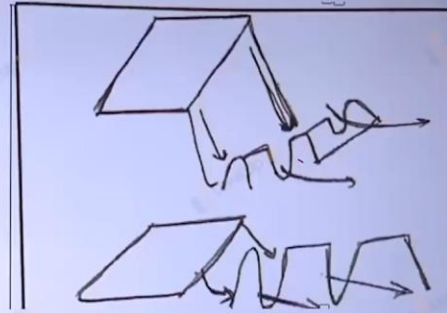

Longitudinal valley is an elongated valley found between two almost-parallel mountain chains in geologically young mountains.

Lacustrine Mean
Derived from

Himalayas are not water divide

1. Almost all the Himalayan rivers cut across mountains and drain into N. Plain
2. Such Rivers are called as **Antecedent Rivers**. Rivers are older than Himalayas as Himalayas uplifted the rivers could cut across the Himalayas.
3. This happened because they were large enough and Himalayas were rising at a slow rate, were the rivers could keep pace with the rising mountains.
4. When **Mountains** were **being uplifted**, they rivers form Tilted longitudinal valleys. The lakes were formed in the beds called as Lacustrine.

Longitudinal valley is an elongated valley found between two almost-parallel mountain chains in geologically young fold mountains

Kashmir Himalayas

- Series of Range: Karakoram, Ladakh, Zaskar, Great Himalayas, Pir Panjal, Shivalik
- Valley of Kashmir and Dal Lake is in between Great Himalayas and Pir Panjal.
- Glacier: Baltoro and Siachen.
- Famous: Karewa formations for cultivation of Zafran, local variety of saffron.
- Imp passes of the region are
 - Zoji La on Great Himalayas,
 - Banihal on Pir Panjal,
 - Photu La on Zaskar
 - Khardung La on Ladakh range.

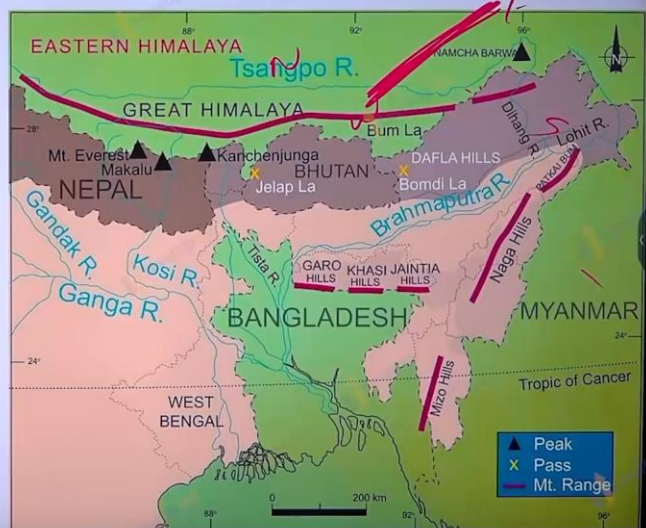

Himachal and Uttarakhand Himalayas

- Between Ravi River (West) and Kali on East (tributary of Ghaghara)
- Drained by 2 major river systems: Indus & Ganga.
- Tributaries of Indus: Ravi, Beas and Satluj.
- Tributaries of Ganga: Yamuna and the Ghaghara.
- All 3 ranges of Himalayas are visible: Great Him, Middle Him (Known as Dhauladhar in HP & Nagtibha in UTK) and Shiwalik Range.

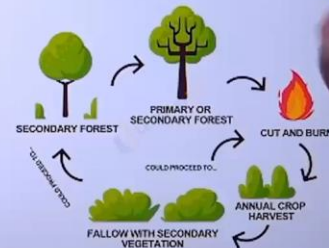

Darjiling and Sikkim Himalayas

- Flanked by Nepal Himalayas (West) & Bhutan Himalayas (East).
- Rivers such as Tista
- Peaks: Kanchenjunga
- Tribe: Lepcha tribes
- Tea Gardens: Moderate slope, thick soil cover with high organic content, well distributed rainfall throughout the year and mild winters (Duar formations)

LevelUp AS Arunachal Himalayas

- East of Bhutan Him upto Diphu pass (in East)
- Imp Mtn Peak: Namcha Barwa.
- Imp Rivers: Bhramaputra, Kameng, Subansiri, Dihang, Dibang, Lohit.
- Imp Tribe: Monpa, Abor, Mishmi, Nyishi and Nagas.
- Tribes practise Jhumming (Shifting or slash and burn cultivation).

LevelUp AS Eastern Hills and Mountains

- General alignment: North to South direction.
- Local Names: Patkai Bum, Naga hills, Manipur hills, Mizo or Lushai hills.
- Imp River: Barak River
- Manipur has famous lake (Loktak lake)
- Mizoram has 'Molassis basin': soft unconsolidated deposits.

1. Keibul namjau national park, sangai deer(dancing deer)
2. Floating national park. This appear to floating because of kumdi vegetation.

Passes:

- Sikkim: Jelep La, Nathu La
- Tse La: Dapla

2022: Location

Consider the following pairs:

Peak	Mountains
1. Namcha Barwa	Garhwal Himalaya
2. Nanda Devi	Kumaon Himalaya
3. Nokrek	Sikkim Himalaya

Which of the pairs given above is/are correctly matched?

- (a) 1 and 2
- (b) 2 only
- (c) 1 and 3
- (d) 3 only

Namcha barwa is arunachal pradesh

Garhwal in Uttarakhand

2017: Location

Consider the following statements:

- 1. In India, the Himalayas are spread over five States only
- 2. Western Ghats are spread over five States only.
- 3. Pulicat Lake is spread over two States only.

Which of the statements given above is/are correct?

- (a) 1 and 2 only
- (b) 3 only
- (c) 2 and 3 only
- (d) 1 and 3 only

North East

- Patkai: Arunachal: Diphu pass, Monpa Tribe
- Naga Hills: Nagaland: Saramati Peak, Mollen Nation Park
- Manipur: Loktak Lake, Metei tribe, Lalmatol Range
- Barail Range: Assam, Naga, Manipur, Source of Barak River, Watershed between Brahma and Barak River
- Mizo Hill: Blue Mountain, Molassis Basin, Lushai Hills
- Meghalaya: Nokrek peak is on???? Khasi which is capital of Shillong is on? Bamboo Drip???
- Sikkim: Kunchenjunga Peak, Lepcha Tribe, Khecopalri Lake, Zemu Glacier, Rumtek Monastery, Teesta river

Tripura: Kamlasagar Lake, Rudrasagar Lake

India Map Location

2013:

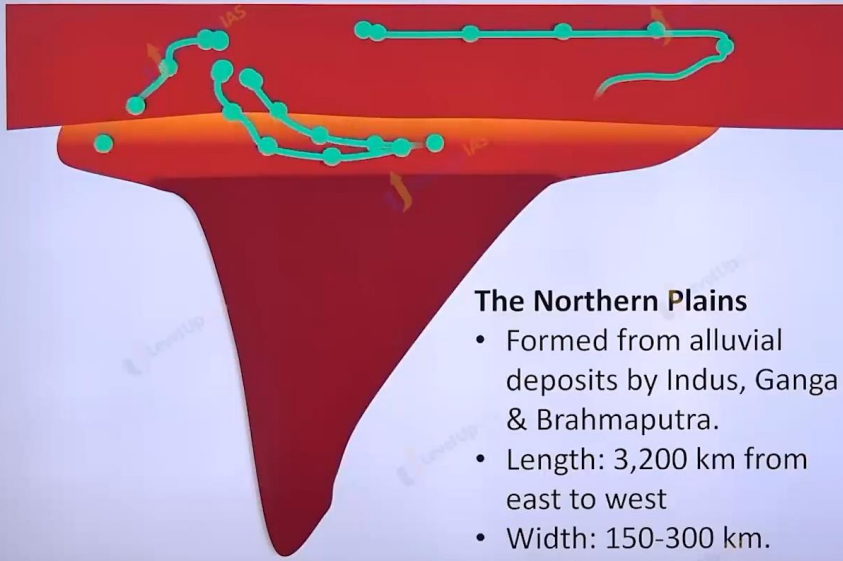

Consider the following pairs:

1. Nokrek Biosphere Reserve : Garo Hills
2. Loktak Lake : Barail Range
3. Namdapha National Park : Dafla Hills

Which of the above pairs is/are correctly matched?

- (a) 1 only
- (b) 2 and 3 only
- (c) 1, 2 and 3
- d) None

Formation of northern plains

The Northern Plains

- Formed from alluvial deposits by Indus, Ganga & Brahmaputra.
- Length: 3,200 km from east to west
- Width: 150-300 km.
- Depth: 1,000-2,000 m.

PLAINS OF THE

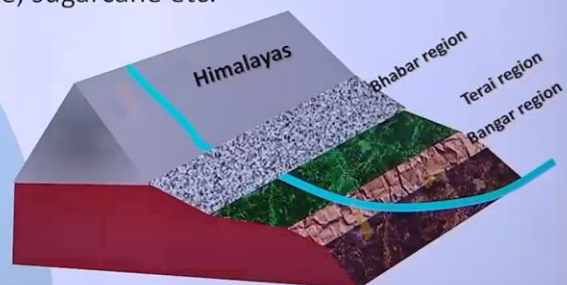

NORTHERN INDIA

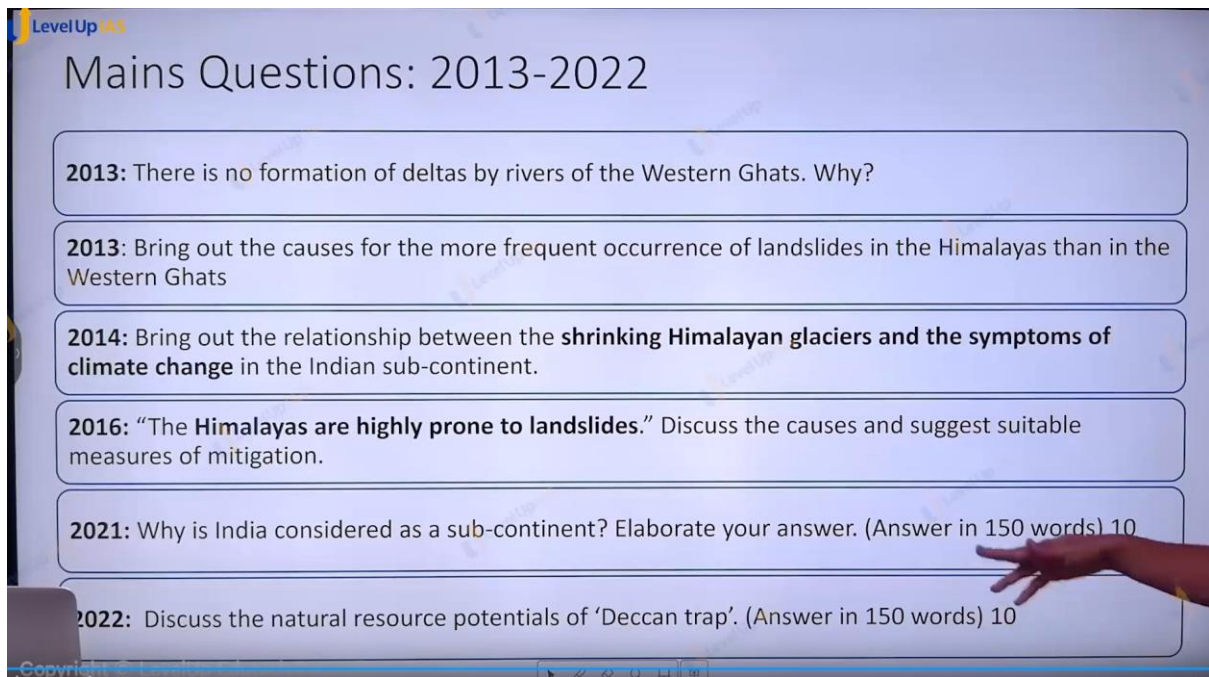

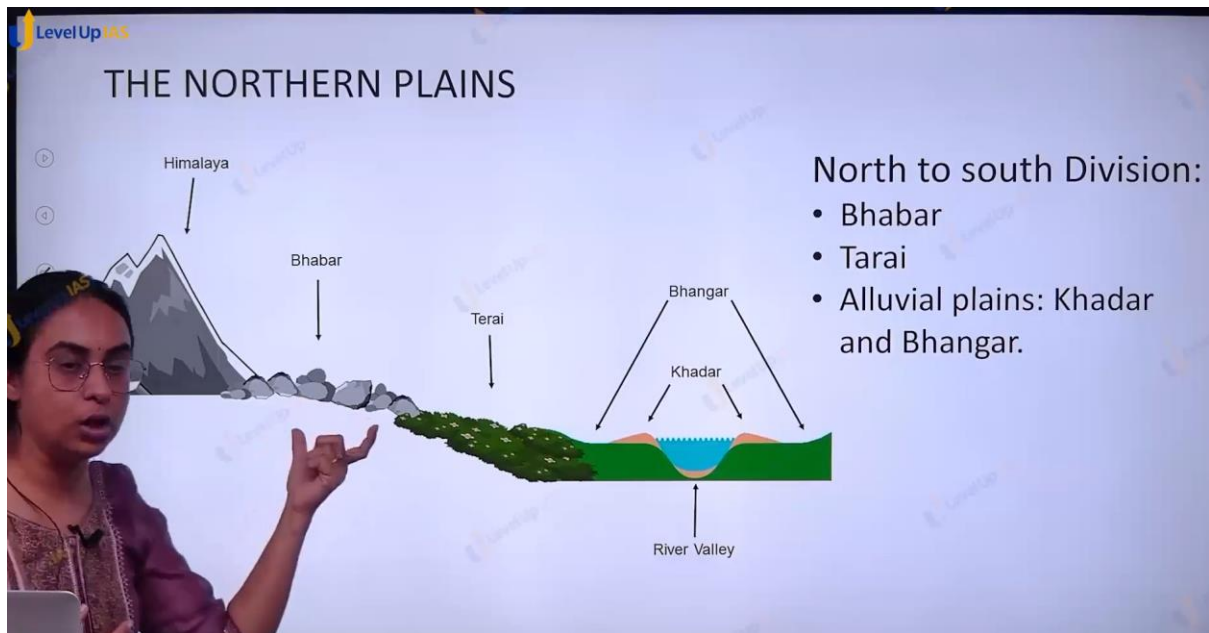

THE BHABAR PLAINS

- Narrow belt: 8-10 km parallel to Shiwalik
- Lie to the south of Shiwalik
- Jammu to Assam.
- Rivers coming from mountains deposit bigger rocks, boulders
- River disappear in this zone
- Not suitable for cultivation: Forested Areas and Big trees

THE TARAI PLAIN

- South of the Bhabar tract
- Width: 10-20 km
- Rivers re-emerge here creating marshy-swampy conditions
- Good for the cultivation of Wheat, rice, maize, sugarcane etc.

No Deltas in the western ghat:

1. They are very steep. So the velocity of water is high no they flow with the narrow basin.
2. The rock are very hard. Western ghat formed by the block mountain and the rock are found in the igneous rocks there is less erosion.

3. It rocky coast to dopostion is carried away by the water.
 4. And wave are stronger in the western coast and due to submerge coast side.
 - 5.
-
